
LarchCoat – Coating of Larch in Exterior Applications

The increased use of larch wood in exposed exterior applications has risen the demand for durable coating systems for this sort of timber. However, larch wood has proven to be a challenging substrate for coatings.

The research project LarchCoat aims at investigating the properties and variability of larch wood surfaces as well as the development of coatings on larch with good weathering performance. Furthermore, methods to detect problematic surface properties of larch wood will be developed.

Title of project: LarchCoat – Coating of Larch in Exterior Applications

Support Program/Supported by/Sponsored by: FFG

Duration: 2011– 2014

Responsible for project/Project Leader/Contact: Dr. Gerhard Gröll (g.gruell@holzforschung.at)
