
Oils and Waxes for Comfortable Surfaces of Low Emission Parquet Floors

This project combined technical criteria with haptics and health aspects of wooden flooring with a specific focus on the growing segment of materials with oil and wax treatment. One major topic was the assessment of emissions of volatile organic compounds (VOC) to meet the criteria of present and future regulations, such as the AgBB scheme in Germany. Major factors influencing temperature sensitivity and a comfortable feel of surfaces were elaborated as well as the effect of care and methods to repair damaged surfaces.

Title of project: Oils and Waxes for Comfortable Surfaces of Low Emission Parquet Floors

Support Program/Supported by/Sponsored by: FFG

Duration: 2010 – 2011

Responsible for project/Project Leader/Contact: Dr. Gerhard Gröll (g.gruell@holzforschung.at)
