
Wood surfaces with oil and wax finishes

Oil and wax finishes play a significant role among treatments of wood surfaces in the furniture and flooring sector. Comparative testing of surface coating products was conducted in cooperation with the ACR-institute "ofi". On the basis of this test data a study was carried out which included the definition of product groups and the classification of oil and wax surface finishes according to their quality. The results serve as a foundation for reviewing or creating standards and guidelines applicable to surface finishes for furniture and wood flooring.

Title of project: Wood surfaces with oil and wax finishes

Support Program/Supported by/Sponsored by:

Duration: 2008

Responsible for project/Project Leader/Contact: Dr. Gerhard Gröll (g.gruell@holzforschung.at)
